- **Easy to use and enterprise ready.** Comprehensive orchestration, integration, security, monitoring and none-functionals to suit any team size
- **Simple commercials.** Pay-as-you-go and through your existing Google Cloud account. Prices from \$0.99 p/hour

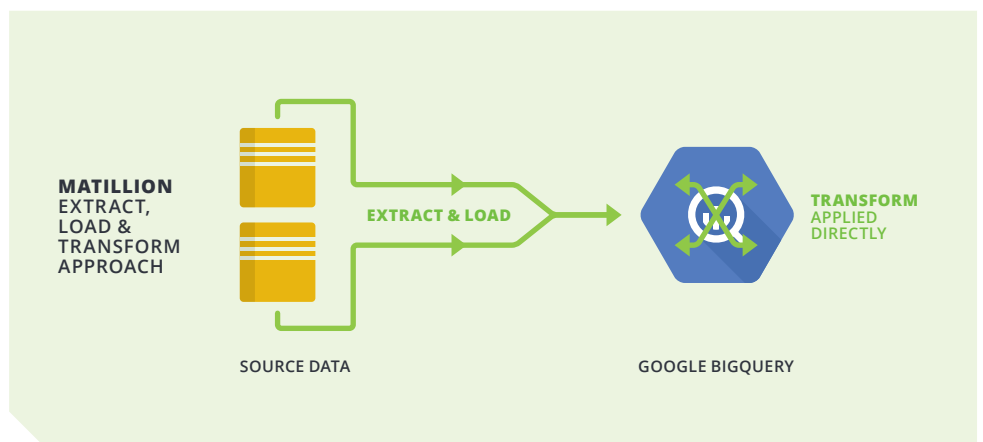

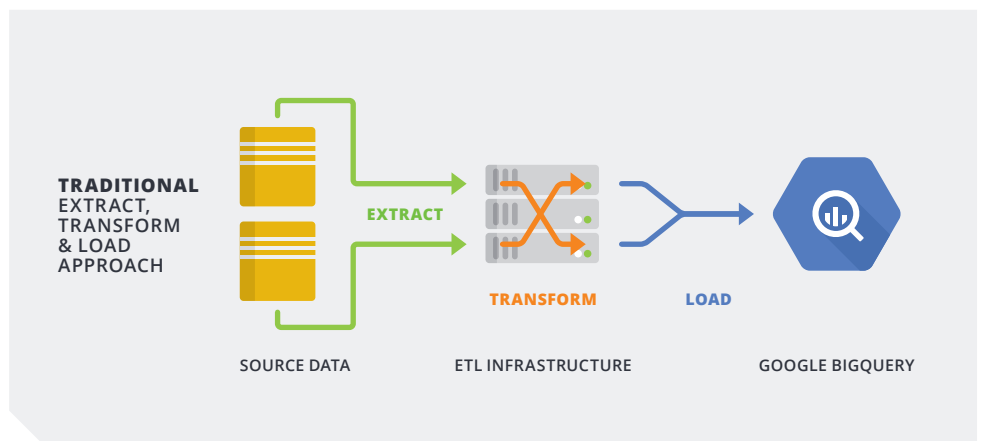

Load data

With a few clicks you can **load data directly into BigQuery**, fast, from Cloud Storage; relational, columnar, cloud and NoSQL databases; FTP/HTTP; REST, SOAP, & JSON APIs; and directly from enterprise and cloud-based systems including Salesforce.com, Netsuite, SAP, Google Analytics, Google Adwords, Facebook, Twitter and many more.

Transform data

Matillion ETL for BigQuery **transforms data at eye-popping speed** in a productivity-orientated, streamlined, browser-based graphical job development environment. Expect **50% reduction in ETL development and maintenance effort** and months off your project as a result of the streamlined UI, perfect integration to Google Cloud Platform & BigQuery and the sheer speed.

How Matillion ETL for BigQuery works

Orchestrate

Matillion ETL for BigQuery delivers a rich orchestration environment where you can orchestrate data load and transform; control flow; integrate with other systems and GCP services via Bash, iterate; manage variables; create and drop tables; soft code ETL/ELTs from configuration tables; and develop data quality, error-handling and conditional logic.

There is a **comprehensive scheduler built-in** to Matillion ETL for BigQuery to schedule and run individual jobs or complete projects. You can also call Matillion ETL for BigQuery jobs externally, from other systems, based on events, or from a 3rd party scheduling product.

Enterprise Ready

Work as a team

Matillion ETL for BigQuery delivers support for teams with comprehensive version control; live collaboration; and multi-environment support for controlling development, test and production environments. You can also import and export Matillion jobs between instances, as JSON.

Simple to deploy and scale

Matillion ETL for BigQuery is delivered as an image and requires no extra servers or other infrastructure.

Supported systems

Matillion ETL for BigQuery integrates with a wide variety of data sources:

- › Google Cloud Storage
- › Cloud and on-premise relational databases (MySQL, MSSQL, Postgres, Oracle, Sybase, IBM DB2, IBM DB2 for i, Teradata)
- › NoSQL databases (MongoDb etc.)
- › Enterprise systems (SAP, Netsuite, Microsoft Dynamics NAV and AX)
- › CRM and Marketing (Salesforce.com, Microsoft Dynamics CRM, Hubspot, Google Analytics, Google Adwords)
- › Social Networks (Facebook, Twitter)
- › Any REST, JSON or SOAP API
- › FTP and HTTP

Monitoring, logging and alerting

Matillion ETL for BigQuery delivers a wide range of options around monitoring, logging and alerting – real time and historical.

MATILLION ETL FOR REDSHIFT KEY FEATURES

- › Comprehensive data ingestion support
- › Browser-based graphical job development environment
- › Rich orchestration layer
- › Complete scheduling, monitoring and alerting
- › Version control

Cheap. Billing via Google Cloud account

Matillion ETL for BigQuery starts from \$0.99 per hour with no up-front costs or long-term commitments.

Billing is via your existing Google Cloud account, so no new vendor to set up or payment terms to negotiate. Matillion ETL for BigQuery appears in your Google Cloud monthly statement, like any other GCP service.
